

Carlson Appointed CEO of Unison Products

Veteran of high-growth audio and embedded technology companies to lead development of invisible speaker systems

February 3, 2006, West Newton, MA – Unison Products, Inc., the developer of invisible speaker systems, announced today that it has appointed Jason L. Carlson as Chief Executive Officer. Carlson has also been appointed to the company's board of directors. He takes over the CEO role from Kevin M. Johnson, the current Chairman and former Acting CEO of Unison Products, who helped found the company in 2005. Johnson will continue to serve on the Unison board and provide technical and engineering support to the company as they grow their team.

"We looked for a very long time to find someone with a background in audio and embedded technology who also had both international experience and proven leadership in high growth companies," said Johnson. "Jason has an outstanding reputation and a great background for this business. We are confident that he has what it takes to accelerate our growth as a company and to tap into the global potential of our speaker technology."

Carlson brings to his new role a track record of building profitable businesses and successfully developing other new audio and electronics technologies. Prior to joining Unison, Carlson was the CEO of Semtech Corporation, a publicly traded semiconductor company headquartered in California. Before that he was VP/General Manager of the Crystal Audio business at Cirrus Logic, CEO of AudioLogic, and a founding Team member of ReSound Corporation. Over the past 20 years, his experience includes a mix of publicly traded companies with \$200 – \$800M in revenue, as well as two other startup companies (pre-revenue thru IPO).

"I am thrilled to take the reigns of such an exciting company," said Carlson. "We have a novel technology and a very large addressable market comprised of a wide variety of growing applications and customers. With our exceptionally strong value proposition, I know that we can drive rapid adoption of this important and compelling new technology. Not only is the product great, but we are also blessed with a team of talented and motivated individuals who have a passion for audio, plenty of relevant industry experience, and a strong desire to bring innovative new products to market."

Unison Products develops embedded audio solutions for leading electronics manufacturers that "disappear" into the display enclosure. Unison's state-of-the-art *Edge Motion*™ speaker systems offer several significant benefits over conventional speakers. This patented technology uses small actuators to drive the side of a thin, flat or slightly curved membrane. Using optically transparent materials, full range mono or stereo speakers literally disappear into the display enclosure, reducing the need for separate speaker enclosures and unifying the sources of both the audio and visual content.

About Unison Products, Inc.

Headquartered in West Newton, Massachusetts, Unison Products is a leader in the development of innovative audio technologies that will change the way people look at speakers. The company's patented *Edge Motion*™ speaker systems enable leading electronics manufacturers to create products that offer a vastly improved listening experience in home entertainment, desktop and portable use. Display-based products with Unison's embedded speaker solutions are truly invisible high-fidelity solutions that will revolutionize the presentation of music and video content. More information about Unison Products is available at www.thinfilmaudio.com or 508-650-0088.
