

Industry Veteran Allan Evelyn Joins Unison Products

Move strengthens company's plan to bring invisible speaker systems to market

August 5, 2005, West Newton, MA – Unison Products, Inc., the developer of invisible speaker systems, announced today that it has appointed Allan J. Evelyn as Vice President of Business Development. In this role, Evelyn will be responsible for developing and managing relationships with leading consumer electronics manufacturers who can benefit from the company's embedded speaker systems.

"Allan's experience in audio and consumer electronics will be a tremendous benefit to the team," said Kevin M. Johnson, Chairman and acting CEO of Unison Products. "I have already been working with Allan in his role as a consultant on this project. He has done a great job of defining target applications, demonstrating the potential of our technology, and building relationships with leading CE manufacturers."

Prior to joining the management team as a full-time employee, Evelyn was a consultant to Unison Products, working on the commercialization of the company's patented *Edge Motion™* speaker technology. Previously, Evelyn was President of Boston Acoustics, a leading audio and electronics company, and a major OEM supplier to the computer and auto industry.

Before joining Boston Acoustics, Evelyn spent seventeen years with Bose Corporation, the last several years as General Manager, Americas. He directed the wholesale business channels in the US, Canada, and Latin America, and was also responsible for the worldwide military business. Prior to Bose, Evelyn held executive roles with other well-known consumer electronics companies, including JBL (Harman International) and dbx, Inc.

"I have been in this industry a long time and Unison's amazing new speaker technology is unlike anything people have seen or heard before," said Evelyn. "I am thrilled to be part of the team that is bringing it to market. We can dramatically enhance consumer products by embedding smaller, better sounding speaker systems. It's truly revolutionary. I wish I had something like this to work with in some of my previous corporate roles. From my work as a consultant to Unison, I already know that both consumers and manufacturers want and need what we can offer them."

Unison Products develops embedded audio solutions for leading electronics manufacturers that "disappear" into the display enclosure. Unison's state-of-the-art *Edge Motion™* speaker systems offer several significant benefits over conventional speakers. This patented technology uses small actuators to drive the side of a thin, flat or slightly curved membrane. Using optically transparent materials, full range mono or stereo speakers literally disappear into the display enclosure, reducing the need for separate speaker enclosures and unifying the sources of both the audio and visual content.

About Unison Products, Inc.

Headquartered in West Newton, Massachusetts, Unison Products is a leader in the development of innovative audio technologies that will change the way people look at speakers. The company's patented *Edge Motion™* speaker systems enable leading electronics manufacturers to create products that offer a vastly improved listening experience in home entertainment, desktop and portable use. Display-based products with Unison's embedded speaker solutions are truly invisible high-fidelity solutions that will revolutionize the presentation of music and video content.
